

REQUIRED PESTICIDE SIGNAGE FOR RETAILERS

Nov. 08 Update

The first sign is a Warning Sign required by Chapter 149A-15.5 Hawaii Revised Statutes. It should be posted prominently where any pesticides are displayed. Pesticides include a wide range of substances including disinfectants, which control bacteria and viruses, herbicides, which control weeds, insecticides, fungicides, rodenticides, flea and tick products, and many others. If the product label has an EPA Registration Number or EPA Reg. No., it is a pesticide.
